## SEMI-CUSTOM DISPOSABLE TRAY SYSTEM

**BORDER-LOCK** is the first semi-custom disposable tray program specifically designed to outperform stock metal trays. The complete system contains eight upper and eight lower trays each uniquely designed in arch size, as well as arch form. The precise sizing method identifies the appropriate tray to create an exact fit not found in any other stock tray. High quality design and material increases rigidity to a level, which rivals that of metal trays. For more information, call Accu-Liner at (800) 458-6627.

## ADVANCED ENDODONTIC SYSTEM

Designed for today's more technologically advanced practice environment, the Advanced Endodontic System features a modular control panel with templates to fit most popular brands of instruments, which are fully integrated into the system with operation from only one foot control. The systems can be customized with the instruments of the dentist's choice and arranged in the order they select for convenient, ergonomic access. For more information, call ASI at (800) 566-9953.

## LEAD-FREE X-RAY APRONS

Clive Craig's new Lead-free Apron provides protection for patients from secondary (scatter) radiation during intraoral or panoramic radiography without the weight or toxicity of lead. The Lead-Free (available with or without collar, and in a pant poncho) features a new high tech alloy that provides protection equal to a traditional Lead Apron weighs up to 50% less. For more information, Clive Craig at (800) 833-8267 or visit clivecra

## APEX LOCATOR

Parkell's Paramatron D-10 is an electronic apex locator designed to quickly identify the apical end in canals contaminated with sodium hypochlorite solution, blood, or any other fluid. It features a graphic display that shows lights to indicate the file's progress down the canal. Four audio tones accompany the lights, enable user to work comfortably without watching play. For more information, call Parkell at 7446.
